

Given: Graph G + Terminal nodes U

Bsp. 1: G

Bsp. 2: G

1. Compute all-pairs shortest-paths on the terminal nodes in U .
(the shortest path for all pairs $U \times U$)

Bsp. 1: G'

Bsp. 2: G'

2. Compute the minimum spanning tree on G' .

Bsp. 1: T

Bsp. 2: T

3. Map back the minimum spanning tree T into the original Graph G .

Cost: 6
(best)

Cost: 9
(not the best)

greedy algorithm
